

NOTES

- 1. Set pressure range is 75 psi to 250 psi.
- 2. Relief capacity is given by the equation $Q=0.31(1.1P+14.7)$, where
 Q =Relief capacity in SCFM, And
 P =Set Pressure in psi
- 3. The manufacture and test of the safety valve is according to the standard: ASME code section VIII Division UG-125 to UG-137.
